

Accessibility Statement — App Stack

Scope

This statement applies to **app-stack.net** and connected web experiences.

Our Standard & Current Status

We are committed to making our website usable by everyone. We work toward **WCAG 2.2 Level AA**. Our most recent assessment (VPAT® 2.5, *August 15, 2025*) evaluated the site against **WCAG 2.0 A/AA** and found **overall “Partially Supports.”**

How We Test

We combine automated checks and manual audits, including screen-reader and keyboard testing. Tools and AT used include **axe**, **Colour Contrast Analyser**, and **NVDA**, **JAWS**, **VoiceOver** on current Chrome/Firefox/Edge/Safari across Windows and macOS.

Compatibility

Our site is intended to work with current versions of major browsers on desktop and mobile OSs and with assistive technologies that follow platform accessibility APIs.

Known Accessibility Limitations (from our VPAT)

We’re actively addressing the following items noted during testing:

- **Non-text content:** some decorative images/icons are not hidden from screen readers.
- **Info & relationships / landmarks:** missing or incorrect heading levels and landmarks on certain pages (e.g., missing H1 on “About,” footer landmark not defined on “Login,” dashboard landmarks).
- **Bypass blocks:** “Skip to main content” link not present.
- **Page titles:** some pages lack descriptive/unique titles.
- **Focus order & forms:** focus can enter an unexpanded accordion; focus doesn’t move to first invalid field; required fields aren’t always announced.
- **Name/Role/Value:** accordion name/state not exposed; “show/hide password” control lacks an accessible name.
- **Contrast:** certain texts (e.g., “Login,” placeholders, specific headings) fall below **4.5:1**.

Feedback & Accommodation Requests

If you encounter an accessibility barrier or need content in an alternative format, please contact us:

- Email: accessibility@app-stack.net
- We aim to reply within **2 business days** and resolve issues where feasible within **10 business days**.

Documentation

- **Accessibility Conformance Report (VPAT® 2.5):** [Link to your VPAT]

Ongoing Improvements

We're adding a global skip link, correcting heading hierarchy and landmarks, fixing low-contrast styles, ensuring required fields are programmatically conveyed, and labelling interactive controls (e.g., show/hide password). We review this page after major releases and at least **annually**.
